# RDS Connected Fleet
One System. Everything at a glance.

rosenbauer

For the moment when reliability is not only required - it is essential

RDS Connected Fleet offers you a perfect overview of your entire vehicle fleet and supports you in simplifying your daily work. The solution, which is optimized for emergency services, collects all information and automatically transmits it to the fleet manager.
If a fault, message or maintenance is found, you will be informed immediately. If there are gaps in the logbook or if work is not carried out, the system reports automatically. In this way, RDS Connected Fleet ensures that the vehicles are fully operational, reduces repair costs and, especially with larger fleets, helps to keep an eye on their overall condition.

RDS Connected Fleet can be ordered as standard with all Rosenbauer vehicles, but it can also be retrofitted to your existing fleet. This means that you not only know where the vehicles in your own fleet are at the moment, you can also call up all information on the equipment levels and the current status in real time.
(Only possible for Rosenbauer vehicles with CAN bus technology)

Advantages at a glance

Compatible system
RDS Connected Fleet is available for common mobile platforms such as Android, iOS and as a web application.

JETZT BEI Google Play   Erhältlich im App Store   www

Functions in detail

Logbook
RDS Connected Fleet digitizes and simplifies daily tasks. The system informs you if journeys have not been written and incidents during the journey are automatically stored. RDS Connected Fleet is the first step towards a digital fire brigade.
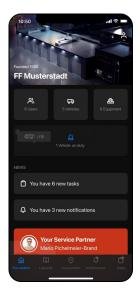

Perfect overview in the dashboard
RDS Connected Fleet provides an optimal overview of the status of all vehicles and components, including a live display of the equipment and intelligent message management.

Geofencing and Live-Position
Always in the picture where your vehicles are. This means it is clear at a glance which vehicle is closest to the place of use or whether it is outside the area of use - for service reasons or illegally.

Simple self management
This solution offers an easy way to manage your fleet and equipment. Furthermore, the access and rights for members can be managed by themselves. A well thought-out rights system shows the members everything they need, but only what they need

Optimal evaluation
RDS Connected Fleet offers the possibility of extensive, detailed signal evaluation and a guide to help yourself on simple errors.
